

Thiago Luis Trotta

Advanced Information Systems Engineering Student

✉ trottathiago1@gmail.com 📍 Bahía Blanca, Argentina 🐙 [GitHub](#) 🌐 [Web Portfolio Web](#)

Summary

Future Information Systems Engineer with academic teaching experience and a Full Stack profile. I believe that good software development starts with understanding exactly what the client needs, long before writing the first line of code. I apply this same mindset outside of university, where I always use my free time to build my own applications, experiment with System Architecture, and stay up to date with the Artificial Intelligence ecosystem. I am looking to join a forward-thinking project where I can contribute my technical foundation, actively collaborate, and build a long-term professional career.

Education

Universidad Nacional del Sur

Information Systems Engineering • Degree Progress: 88.23%

Bahía Blanca, Argentina • Mar 2022 - Present

Advanced student finishing my 5th year.

Experience

Universidad Nacional del Sur

Bahía Blanca, Argentina

Teaching Assistant

Aug 2025 - Dec 2025

Collaborated in teaching practical classes for the **Software Models** and **Formal Methods** courses.

Actively participated in teaching course concepts and grading exams, while coordinating grading criteria with the teaching team.

Projects

Hogarí (Rental Recommendation System)

- Implemented a web platform for finding rental properties.
- Built a scraping pipeline in Python to extract listings and stored them in PostgreSQL, using PostGIS to handle geospatial queries.
- For the interface, I developed an interactive map with MapLibre and integrated a natural language recommendation engine using the Vercel AI SDK, structuring the entire core application with Next.js and TypeScript.

Sky Reach (Drone E-commerce)

- Built a complete e-commerce platform where I gained in-depth experience in relational database design and creation.
- During development, I integrated a role-based authentication system, MercadoPago payments, various third-party APIs, and AI tools, all built with Next.js and PostgreSQL.

Study Sessions (Productivity Web App)

- Co-developed a productivity web platform featuring Pomodoro timers and task management.
- Implemented RESTful endpoints to optimize client-server communication and integrated the Spotify API to enhance the user experience (UX), using React, Node.js, and TypeScript to ensure system robustness.

DCIC Chatbot

- Developed a chatbot for the Computer Science Department (DCIC) as part of an extracurricular course on Text Mining and Machine Learning.
- To resolve administrative queries, I used a RAG architecture by building an API with FastAPI, retrieving relevant information via semantic embeddings, and generating responses using Google models and Python.

Technical Skills

- **Frontend:** React, Next.js, TypeScript, Tailwind CSS, Three.js, GSAP, Responsive Design, and UX-focused development.
- **Backend & Databases:** Node.js, Express, Prisma, PostgreSQL, Java, Python, Kotlin.
- **AI Ecosystem & Tools:** Terminal Assistants, Model Context Protocol (MCP), agentic workflows, Git/GitHub.
- **Software Design:** System Architecture, Design Patterns, REST API Integration, Networking Fundamentals.
- **Languages:** English (Intermediate - B1) | Spanish (Native).

Soft Skills

- **Colaboración técnica:** Experience in collaborative repository development, joint problem-solving, and team-based architecture design.
- **Communication & Active Listening:** Ability to explain technical concepts and guide others, combined with a strong willingness to receive feedback and learn from more experienced professionals.
- **Technical Self-Management:** Quick adaptation to new technologies and autonomous resolution of code and infrastructure problems.
